01

INTRODUCTION

Motivation

Question: what are the prices of museums in the different cities of Belgium according to the average income of these cities?

To respond to the question, we used a website with all the museums of Belgium.

02

DATA

DATA

Name	City	Visiting time	Price adult	Price child
La boverie	Liège	1 hour	5€	0€

Columns: 5

Lines: 165

Visualization: map

03

MODELLING APPROACH

MODELLING APPROACH

We want to compare the price of museums in the municipalities with the average income per municipality.

Regression

04 CONCLUSION

CONCLUSION

WHAT WE STILL NEED TO DO

The visualization: the map with all the prices of the museum

The regression model: see if there is a relation between the prices of the museums and the medium income in a municipality

THANKS
